

SMART INDIA HACKATHON 2026

- **Problem Statement ID - SIH26033**
- **Problem Statement Title-**
Multiple intermediaries reduce farmers earnings and increase consumer prices
- **Theme- MedTech/ BioTech/ HealthTech**
- **PS Category- Software**
- **Team Name- AgriNexus**

Problem:

Multiple supply chain **intermediaries** reduce farmer earnings, **inflated** consumer prices, restricted market access, creates **price volatility** through inefficient logistics.

Our Idea:

KisanSetu is a marketplace connecting farmers with buyers via **Spot and Future Harvest** markets, using price prediction and collection centers for **fair and efficient trading** with **minimum involvement**.

Proposed Solution:

- **2-checkpoint based** marketplace, connecting farmers with buyers; ensuring fair pricing and reliable sustained quality.
- Supports **Spot Market** for immediate sales and **Future Harvest Markets** for crop bookings in advance via the app.
- Optimized consumer requirements, buyer matching, and logistics by **redistributing tasks** in 2 channels.

Innovation / Uniqueness

- Government-led agricultural application guaranteeing direct, **secure** farmer-to-buyer transactions.
- Smart buyer matching with transparent, **reduced** market rates
- A fully **traceable** ecosystem with instant digital payments.

Software

User Authentication: Secure registration and profile verification for all users.

Produce Listing: CheckPoint-1 manages inventory and the essential details.

Marketplace Access: Buyers browse, compare, and place orders.

Order Management: Orders are validated and processed efficiently.

Payment & Fulfillment: Secure payments and coordinated delivery.

Order Tracking: Real-time tracking until successful delivery.

Feedback System: Ratings and reviews improve platform trust.

Supply-Chain Flow:

System WorkFlow:

Challenges & Strategies

Logistics Coordination

Managing pickup, transportation, delivery and storage efficiently.

Decentralised Distribution

Enables quality checks, aggregation and efficient delivery.

Building Trust

Farmers and intermediaries need to trust the platform and each other.

Digital Trust

Verified users, secure payments and real-time order tracking.

Quality Control

Maintaining a standard, appreciable quality for all orders irrespective of source farmer and location.

Smart Buyer Matching

Connects farmers with suitable buyers.

Government reforms and schemes

e-NAM Integration- Builds upon India's push toward transparent, unified digital agricultural markets.

APMC Reforms- Supports e-trading, wider markets and competitive price discovery.

Stronger Rural Economy- Increased farmer earnings boost rural purchasing power.

₹3.19L Cr → ₹4.84L Cr in cumulative e-NAM trade; rapidly growing role of Indian agri-Tech markets.

For Scalability

Multi-Stakeholder Integration: Easily scales to accommodate growing numbers of farmers, buyers, and transactions.

Regional Adaptability: Multilingual and region-specific features enable utilization across diverse agricultural communities.

For farmers and consumers

Higher Earnings- Better price discovery and reduction of unnecessary margins.

Fair Pricing- Reduction of supply-chain inefficiencies lowers excessive markups.

Better Availability & Transparency- Efficient logistics and traceable transactions improve access and trust.
